

Dromedary International

Dear Dan.

I have an Awesome true story about the Magnum Board.

The first part of this year, One of my business partners, Mr. Ron Weems brought back in his Van 10 Sheets of the Magnum Board left over from a job in California to my house here in Scottsdale, AZ.

The product was set inside my block wall (Fence) outside since then. This product has undergone unbelievable weather conditions. From Rain, Freezing, 120 degrees in sun, Monsoons, Dust storms and all other forms of punishment.

Today Tony Serna, A well known Builder in this area (Amigo Construction) and Jonathan Gotcher my business partner went and started to move the board so Tony could take it to a job for installation and cut some for show and tell for Jonathan and myself.

It was unbelievable the Excellent shape this Board was in. Just dusty but perfect. However when we turned the product over, between each sheet were hundreds of crickets nesting between each sheet and one large termite trail that was empty. The Termites could not eat anything so they went back to the ground and the crickets had nothing to hang on to so just bouncing the board knocked them all off.

Tony has been working with standard sheet rock for over 30 years. He was amazed at the condition of the Magnum Board. Just like new.

I can truly tell you that the South West region Team will have no problem showing and selling your products to the builders and consumers from the smallest to the largest.

We look forward to a world supported by Magnum Board.

Regards,

Johnny Shannon - Product Specialist
