Telephone Interview between Mr. Andrew McLain with DPR, Forbes 500 Construction Company and Ms. Karen Stripling, PhD, private individual. Testimonial summarized and emailed to Mr. McClain for confirmation of accuracy of content.

As I understand it, you are designing a 13-story hospital and have selected Magnum Board after conducting a comparative product analysis across all drywall providers. You chose Magnum Board because it offered the absolute highest quality in terms of both product and customer service. In fact, you said that it was your opinion that other providers of MgO Board had less than stellar US based representation.....But not so with Magnum Board.

You also stated that you had tremendous belief that this one product could revolutionize the building industry. Of course, I agree wholeheartedly.

As our conversation progressed, you told me that a sample of Magnum Board and a sample of a competing product have been sitting in a greenhouse for one year. Magnum Board has absolutely no mold growth. On the other hand, the other sample is covered in Black Mold.

Plus, you believe that the use of Magnum Board will eliminate light-gauge backing which will result in significant financial savings.
