“The New Generation **GREEN** Building Material”

“Install It for Health-Install It for Life”

Sheathing & Trim Products

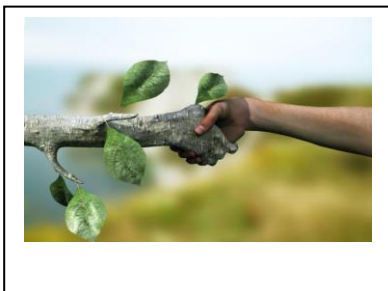

WHAT IS MAGNUM BOARD®

Magnum Board® is a combination interior / exterior sheathing product that replaces all gypsum and cement based products and most wood based sheathing products. Magnum Board® can be used as interior wall board, ceiling board, backer board and underlayment, drop ceiling and trim. Magnum Board® can be used for exterior wall board, fascia, soffit, trim and siding. Magnum Board®: One formulation almost every application.

Magnum Board® is unique in that it is virtually impervious to fire, water and insects; does not feed mold or mildew; and is completely nontoxic. Magnum Board® is one of the “**GREENEST**” and most user friendly materials in the building and construction world today. Because of its unique qualities, the total installed costs of Magnum Board® is extremely competitive and the life cycle costs are lower than traditional building materials used in the market today. Magnum Board® standard density products, density of approximately 1.05, are tested to the very stringent US ICC-ES AC308 acceptance criteria using ASTM test protocol and are UL approved for fire walls. By virtue of the APLAC Mutual Recognition Arrangement (MRA), our testing is recognized by many Countries around the World. Our factory is ISO certified to US standards and is audited by Underwriters Laboratories and the International Code Council for quality assurance. Our 30 year warranty backs up our quality commitments.

Our light density product line, density approximately .95, is in house tested to the same stringent criteria and follows a very rigid quality control process. Our light density is also backed by our 30 year warranty program which can be viewed on our website.

Please visit our website at www.magnumbp.com to view much more information about this **green** sheathing material including install guidelines and pictures of installations around the World.
